

Environment for tutorial

1. Download, install and start recommended Eclipse Version: **Oxygen 2**
<https://www.eclipse.org/downloads/packages/eclipse-modeling-tools/oxygen2>
2. Upon starting Eclipse, create a workspace.
Hint: Enter the location **./ws** to use a subfolder „ws“ of the Eclipse installation
3. Install the following plug-ins via Update Site (*Help -> Install New Software... -> Work With: <Enter URL> -> Press Enter*)
 1. Henshin: <http://download.eclipse.org/modeling/emft/henshin/updates/nightly>
Install all items
 2. MDE Optimiser: http://blog.onboot.org/mdeo_repo/develop
Install all items from the *MDEOptimise*, *Xtend*, and *Xtext* categories
4. Get the projects from the „projects“ folder
